

Real Effects of Non-Streamlined Sales Tax Administration: Evidence from the Florida Hotel Industry

Replication Package Summary

Included in this replication package are:

1. SAS code files that build the two data sets used in our analysis. These draw on public data sources that are referenced by URL in the code. These two data sets are:
 - a. A county-year panel we refer to as the “main data set.”
 - b. A county-year panel that incorporates hotel room price and demand data that we refer to as the “room-level data set.”
2. SAS log files that relate to the above SAS code files.
3. An Excel worksheet that includes the STATA code to run the regressions reported in the manuscript’s tables. This STATA code uses the data sets that are output by the above SAS code files.

If you have any questions about this replication package, please contact Roger M. White (roger.white@asu.edu).
